## CONTENTS

A	Statistical physics	1
B	Thermodynamics	3
B.1	Ideal classical gases	3
B.1.1	Van der Waals-gases	4
B.1.2	Phenomenological temperature measurements	4
B.2	Zeroth law of thermodynamics	4
B.2.1	Exact and closed differentials	5
B.3	First law of thermodynamics	6
B.3.1	Isochoric changes of state	7
B.3.2	Adiabatic changes of state	7
B.3.3	Isobaric changes of state	8
B.3.4	Adiabatic index of a gas	8
B.3.5	Entropy	9
B.4	Second law of thermodynamics	10
B.4.1	Conversion from thermal to mechanical energy	10
B.4.2	Generalised Carnot-engines	11
B.4.3	Entropy and energy conversion	12
B.4.4	Irreversible processes and entropy increase in closed systems	13
B.4.5	Concave functions and Legendre transforms	14
B.5	Third law of thermodynamics	14
C	Probability theory	17
C.1	Kolmogorov axioms for probability	17
C.2	Laplace probability	17
C.3	Conditional probabilities and Bayes' law	18
C.4	Random variables	18
C.5	Characteristic function and moment generating function	19
C.6	Information entropies	21
D	Microcanonical ensemble	25
D.1	Virial theorem	27
D.2	Energy conservation	28
D.3	Legendre transforms and the Hamilton-function	29
D.4	Hamilton-equations of motion	29
D.5	Canonical transforms	30
E	Phase space dynamics	33
E.1	Phase space $\Gamma$	33
E.2	Phase space density $\rho$	33
E.3	Phase space volume: surface and volume	34
E.4	Microcanonical ensemble	35
E.5	Equipartition theorem	35
E.6	Entropy for Hamiltonian systems	37
E.7	Adiabatic invariance of entropy	38
E.7.1	Example: adiabatic invariance in a string pendulum	39
E.8	Entropy as phase space volume at fixed energy	41
E.9	Gibbs-paradox	42
E.10	Thermal wavelength $\lambda_{\text{th}}$	44

F	Canonical ensemble	47
F.1	Marginalisation procedure	47
F.2	Canonical ensemble	49
F.3	Equipartition theorem	50
F.4	Canonical partition function	51
F.5	Helmholtz-free energy $F$	51
F.6	Gibbs-enthalpy	52
G	Macrocanonical ensemble	55
G.1	Macrocanonical ensemble	55
G.2	Macrocanonical potential $J$ and macrocanonical partition $\mathcal{Z}$	56
G.3	Chemical potential $\mu$ and fugacity $z$	56
H	Quantum statistics	61
H.1	Averages in classical and quantum physics	61
H.2	Quantum mechanical partitions	64
H.2.1	Construction of phase space densities	64
H.2.2	Canonical ensemble in quantum statistics	64
H.2.3	Canonical averages of arbitrary observables	65
H.2.4	Macrocanonical ensembles in quantum statistics	66
H.3	Symmetries of wave functions of many particles	67
H.4	Non-interacting systems	68
H.5	Macrocanonical ensembles in quantum statistics	69
H.5.1	Ultrarelativistic ideal Bose-gas	73
H.5.2	Planck-spectrum	75
H.6	Fluctuations in quantum and classical statistics	78
H.7	Third law of thermodynamics and entropy at absolute zero	81
H.8	Fermionic statistics and the exclusion principle	82
H.8.1	Density of states for non-relativistic fermions	83
H.8.2	Fermi-gases	85
H.8.3	Degenerate Fermi-gases in the limit $T \rightarrow 0$	86
H.9	Ideal non-relativistic Bose-gas	87
I	Phase transitions	93
I.1	Van der Waals-gases	93
I.1.1	Typical shapes of interaction potentials	94
I.2	Ising-model for ferromagnetism	96
I.2.1	Transfer matrix method for the Ising-model	97
I.2.2	Isothermal susceptibility $\chi$	99
J	Stochastic differential equations	101
J.1	Brownian motion	101
J.1.1	Langevin-equation	102
J.1.2	Random walks	103
J.2	Fokker-Planck-equation and evolution of distributions	103
J.3	Spectral decomposition of random forces $\sigma_{\eta}(t)$	106
J.4	Irreversible processes	107
J.4.1	Irreversibility in statistical physics	107
J.4.2	Reversibility in classical mechanics	110
X	Mathematical supplement	113
X.1	Relative information entropies	113

Y	Physical supplement	115
Y.1	Gibbs-Duhem relation and intensive state variables . . . . .	115
Y.2	Euler-relation . . . . .	115
