CONTENTS

A Cosmology and the dynamics of the Universe 1
A.1 Physics on cosmological scales . . . 1
A.2 Newtonian gravity . . . 2
A.3 Newtonian cosmology . . . 6

B Gravity and concepts of relativity 9
B.1 Metric structure of spacetime . . . 9
B.2 Metric and inner products . . . 10
B.3 Vectors and covariant derivatives . . . 10
B.4 Geodesics and autoparallelity . . . 14
B.5 Spacetime curvature . . . 16
B.6 Covariant divergence . . . 18
B.7 Geodesic deviation: experiencing curvature . . . 19
B.8 Curvature invariants and curvature tensors . . . 21
B.9 Raychaudhuri-equation . . . 22
B.10 Energy-momentum tensor . . . 25
B.11 Equation of state for ideal fluids . . . 27
B.12 Relativistic fluid mechanics . . . 29

C FLRW-cosmologies 33
C.1 Dynamics of spacetime . . . 33
C.2 Light propagation on a FLRW-spacetime and redshift . . . 34
C.3 Evolution of the Hubble-expansion with time . . . 36
C.4 Gravitational field equation: coupling gravity to matter . . . 37
C.5 FLRW-spacetimes and their dynamics . . . 37
C.6 Redshift and the Hubble-expansion . . . 39
C.7 Friedmann models . . . 40
C.7.1 Continuity equation for ideal fluids . . . 40
C.7.2 Construction of FLRW-models for ideal fluids . . . 41
C.8 Gravitating fluids and spacetime dynamics . . . 43
C.9 Age and distances in a FLRW-spacetime . . . 46
C.9.1 Cosmological distance measures . . . 46
C.9.2 Age of FLRW-universes . . . 47
C.9.3 Future evolution of the scale factor . . . 48
C.10 Conformal structure of FLRW-spacetimes . . . 50
C.10.1 Cosmological horizons . . . 50
C.10.2 Conformal flatness and causal structure . . . 51
C.10.3 Conformal spacetime symmetries . . . 52
C.11 Recession motion of distant objects . . . 55
C.11.1 Recession velocities . . . 55
C.11.2 Recession accelerations . . . 56

D Thermodynamics and cosmology 59
D.1 Temperature evolution and FLRW-dynamics . . . 59
D.2 Cosmic microwave background . . . 60
D.3 Into and out of equilibrium . . . 64
D.4 Photon background as a thermodynamical ensemble . . . 66
D.5 Quantum-statistics and classical statistics . . . 70
D.6 Radiation backgrounds . . . 71

D.7 Particle cosmology . . . 73
D.7.1 Baryogenesis . . . 73
D.7.2 Big bang nucleosynthesis . . . 73

E Early universe and cosmic inflation 77
E.1 Need for inflation and scales . . . 77
E.1.1 Horizon problem . . . 77
E.1.2 Flatness problem . . . 77
E.1.3 Scale problem . . . 78
E.2 Why is accelerated expansion (and stopping it) so difficult? . . . 79
E.3 Quintessence and dynamic dark energy . . . 81
E.4 Gravity of the quintessence filed . . . 83
E.5 Slow-roll approximation . . . 86
E.6 Accelerated expansion in the late Universe . . . 88
E.7 Seeding of cosmic structures in inflation . . . 89

F Fluid mechanics 91
F.1 Fluid mechanics as a continuum theory . . . 91
F.2 From relativistic to classical fluid mechanics . . . 91
F.3 Fluid mechanical equations . . . 93
F.3.1 Continuity . . . 93
F.3.2 Navier-Stokes equation . . . 93
F.4 Ideal versus viscous fluid mechanics . . . 94
F.4.1 Bulk and shear viscosity . . . 95
F.4.2 Viscous fluid mechanics . . . 96
F.5 Fluid mechanical similarity and scaling relations . . . 97
F.6 Gravity and the Poisson-equation . . . 98
F.7 Wave-type solutions and the Jeans-scale . . . 99
F.8 Vorticity equation . . . 100
F.9 Effective processes in collisionless systems . . . 101

G Cosmic structure formation 103
G.1 Structure formation equations . . . 103
G.2 Linearised equations on an expanding background . . . 104
G.3 Peculiar velocity field . . . 105
G.4 Linear structure formation . . . 107
G.5 Nonlinear structure formation . . . 109
G.6 Perturbation theory . . . 110
G.6.1 Eulerian perturbation theory . . . 110
G.6.2 Lagrangian perturbation theory . . . 112
G.7 Dark matter in astrophysical systems . . . 113
G.7.1 Rotation curves of galaxies . . . 113
G.7.2 Virial equilibria of clusters of galaxies . . . 114
G.7.3 Gravitational lensing . . . 117
G.8 Properties of dark matter . . . 120
G.9 Dark matter haloes . . . 120
G.9.1 Spherical collapse of dark matter haloes . . . 120
G.9.2 Mass function of dark matter haloes . . . 122

H Cosmic large-scale structure 127
H.1 Statistics of random fields . . . 127
H.2 Fluctuations on the sky and Limber-projections . . . 131

H.3 Cosmic microwave background anisotropies 134
H.4 Secondary anisotropies in the cosmic microwave background 134
H.4.1 Gravitational lensing of the CMB 134
H.4.2 Thermal and kinetic Sunyaev-Zel'dovich effect 139
H.4.3 Integrated Sachs-Wolfe effect 140
H.5 Weak gravitational lensing by the large-scale structure 141

I Observations of FLRW-dynamics and the ΛCDM cosmological model 145
I.1 FLRW-parameters and the background expansion 145
I.1.1 Hubble-Lemaître constant H_0 145
I.1.2 Spatial curvature Ω_K 145
I.1.3 Cosmological constant Ω_Λ 145
I.2 Cosmic structures and their parameterisation: σ_8 and n_s 146
I.3 Bayes-inference in cosmology 147
I.3.1 Likelihood and probability 147
I.3.2 Bayes' theorem 149
I.3.3 Sampling from the posterior distribution 150
