ACKNOWLEDGEMENTS

Ana Marta Machado de Pinho and Marco Hübner deserve my gratitude for helping with the typesetting, my colleagues Burkhard Fuchs, Matteo Maturi, Tilman Plehn and Markus Pössel for lecturing with me, and Robert Reischke, Elena Sellentin, Sarah Konrad, Hans-Martin Rieser, Maximilian Düll and Carsten Littek for accompanying the lecture as tutors. And it is a pleasure to thank Jens Jasche, Philipp M. Merkel, Francesco Pace, Elena Sellentin and Britta Zieser, who always understood things really, really well and always found a new perspective. If you're interested, please visit cosmology question of the week for weekly appearing questions on cosmology! Concerning the first revision of the script, I'd like to thank the University of Canterbury/Te Whare Wānanga o Waitaha in Christchurch/Ōtautahi, New Zealand/Aotearoa, in particular David L. Wiltshire and Chris Gordon, for their hospitality.

There is a large number of excellent textbooks on cosmology, and my script is not supposed to be a replacement for them. In no particular order I would like to mention:

- M.P. Hobson, G.P. Efstathiou, A.N. Lasenby: General Relativity: An Introduction for Physicists, Cambridge University Press, 2006
- A.R. Liddle, D.H. Lyth: Cosmological Inflation and the Large-Scale Structure, Cambridge University Press, 2000
- V. Mukhanov: Physical Foundations of Cosmology, Cambridge University Press, 2005
- L. Amendola, S. Tsujikawa: Dark Energy - Theory and Observations, Cambridge University Press, 2010
- E. Guyon, J.-P. Hulin, L. Petit, C.D. Mitescu: Physical Hydrodynamics, Oxford University Press, 2001
- R. Durrer: The Cosmic Microwave Background, Cambridge University Press 2008
- E. Poisson: A relativist's toolkit, Cambridge University Press 2004

Data used for plots came from the sources:

- supernova data: A. Goobar et al., PhST, 85, 47 (2000)
- rotation curves: W. de Blok, S. McGaugh and V. Rubin, Astronomical Journal 122, 2381 (2001)
- Planck-spectrum of the CMB: D.J. Fixsen et al., Astrophysical Journal 420, 445 (1994)
- angular fluctuation spectrum of the CMB: A. Lewis, CAMB notes

I would like to acknowledge the lecture LaTeX-class by V.H. Belvadi. The spacetime-diagrams are adapted from the examples on TikZ.net and I am very grateful to I. Neutelings, who made this possible. All python scripts for the generation of figures are available on request, with no implied support.
