

# Contents

<b>0</b>	<b>Introduction</b>	<b>1</b>
0.1	Basic notation of Linear Algebra and Analysis . . . . .	1
0.2	Linear algebraic systems and eigenvalue problems . . . . .	2
0.3	Numerical approaches . . . . .	3
0.4	Applications and origin of problems . . . . .	4
0.4.1	Gaussian equalization calculus . . . . .	4
0.4.2	Discretization of elliptic PDEs . . . . .	6
0.4.3	Hydrodynamic stability analysis . . . . .	10
<b>1</b>	<b>Linear Algebraic Systems and Eigenvalue Problems</b>	<b>13</b>
1.1	The normed Euclidean space $\mathbb{K}^n$ . . . . .	13
1.1.1	Vector norms and scalar products . . . . .	13
1.1.2	Linear mappings and matrices . . . . .	22
1.1.3	Non-quadratic linear systems . . . . .	26
1.1.4	Eigenvalues and eigenvectors . . . . .	28
1.1.5	Similarity transformations . . . . .	31
1.1.6	Matrix analysis . . . . .	32
1.2	Spectra and pseudo-spectra of matrices . . . . .	37
1.2.1	Stability of dynamical systems . . . . .	37
1.2.2	Pseudo-spectrum of a matrix . . . . .	41
1.3	Perturbation theory and conditioning . . . . .	45
1.3.1	Conditioning of linear algebraic systems . . . . .	46
1.3.2	Conditioning of eigenvalue problems . . . . .	48
1.4	Exercises . . . . .	52
<b>2</b>	<b>Direct Solution Methods</b>	<b>55</b>
2.1	Gaussian elimination, LR and Cholesky decomposition . . . . .	55
2.1.1	Gaussian elimination and LR decomposition . . . . .	55
2.1.2	Accuracy improvement by defect correction . . . . .	64
2.1.3	Inverse computation and the Gauß-Jordan algorithm . . . . .	66
2.2	Special matrices . . . . .	70

2.2.1	Band matrices . . . . .	70
2.2.2	Diagonally dominant matrices . . . . .	72
2.2.3	Positive definite matrices . . . . .	73
2.3	Irregular linear systems and QR decomposition . . . . .	76
2.3.1	Householder algorithm . . . . .	78
2.4	Singular value decomposition . . . . .	82
2.5	“Direct” determination of eigenvalues . . . . .	88
2.5.1	Reduction methods . . . . .	88
2.5.2	Hyman’s method . . . . .	92
2.5.3	Sturm’s method . . . . .	94
2.6	Exercises . . . . .	97
<b>3</b>	<b>Iterative Methods for Linear Algebraic Systems</b>	<b>99</b>
3.1	Fixed-point iteration and defect correction . . . . .	99
3.1.1	Stopping criteria . . . . .	103
3.1.2	Construction of iterative methods . . . . .	105
3.1.3	Jacobi- and Gauß-Seidel methods . . . . .	108
3.2	Acceleration methods . . . . .	111
3.2.1	SOR method . . . . .	111
3.2.2	Chebyshev acceleration . . . . .	118
3.3	Descent methods . . . . .	124
3.3.1	Gradient method . . . . .	126
3.3.2	Conjugate gradient method (CG method) . . . . .	130
3.3.3	Generalized CG methods and Krylov space methods . . . . .	136
3.3.4	Preconditioning (PCG methods) . . . . .	138
3.4	A model problem . . . . .	140
3.5	Exercises . . . . .	144
<b>4</b>	<b>Iterative Methods for Eigenvalue Problems</b>	<b>153</b>
4.1	Methods for the partial eigenvalue problem . . . . .	153
4.1.1	The “Power Method” . . . . .	153
4.1.2	The “Inverse Iteration” . . . . .	155
4.2	Methods for the full eigenvalue problem . . . . .	159

4.2.1	The LR and QR method . . . . .	159
4.2.2	Computation of the singular value decomposition . . . . .	164
4.3	Krylov space methods . . . . .	165
4.3.1	Lanczos and Arnoldi method . . . . .	167
4.3.2	Computation of the pseudo-spectrum . . . . .	172
4.4	Exercises . . . . .	183
<b>5</b>	<b>Multigrid Methods</b>	<b>187</b>
5.1	Multigrid methods for linear systems . . . . .	187
5.1.1	Multigrid methods in the “finite element” context . . . . .	188
5.1.2	Convergence analysis . . . . .	195
5.2	Multigrid methods for eigenvalue problems (a short review) . . . . .	202
5.2.1	Direct multigrid approach . . . . .	203
5.2.2	Accelerated Arnoldi and Lanczos method . . . . .	204
5.3	Exercises . . . . .	206
5.3.1	General exercises . . . . .	207
<b>A</b>	<b>Solutions of exercises</b>	<b>209</b>
A.1	Chapter 1 . . . . .	209
A.2	Chapter 2 . . . . .	214
A.3	Chapter 3 . . . . .	218
A.4	Chapter 4 . . . . .	230
A.5	Chapter 5 . . . . .	238
A.5.1	Solutions for the general exercises . . . . .	242
	<b>Bibliography</b>	<b>246</b>
	<b>Index</b>	<b>250</b>
