

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	The idea behind general relativity . . . . .	1
1.2	Fundamental properties of gravity . . . . .	4
1.3	Consequences of the equivalence principle . . . . .	7
1.4	Futile attempts . . . . .	9
<b>2</b>	<b>Differential Geometry I</b>	<b>15</b>
2.1	Differentiable manifolds . . . . .	15
2.2	The tangent space . . . . .	18
2.3	Dual vectors and tensors . . . . .	24
2.4	The metric . . . . .	27
<b>3</b>	<b>Differential Geometry II</b>	<b>31</b>
3.1	Connections and covariant derivatives . . . . .	31
3.2	Geodesics . . . . .	34
3.3	Curvature . . . . .	38
3.4	Riemannian connections . . . . .	42
<b>4</b>	<b>Physics in Gravitational Fields</b>	<b>47</b>
4.1	Motion of particles . . . . .	47
4.2	Motion of light . . . . .	49
4.3	Energy-momentum (non-)conservation . . . . .	54
4.4	The Newtonian limit . . . . .	58
<b>5</b>	<b>Differential Geometry III</b>	<b>63</b>

5.1	The Lie derivative . . . . .	63
5.2	Killing vector fields . . . . .	68
5.3	Differential forms . . . . .	69
5.4	Integration . . . . .	73
<b>6</b>	<b>Einstein's Field Equations</b>	<b>77</b>
6.1	The physical meaning of curvature . . . . .	77
6.2	Einstein's field equations . . . . .	82
6.3	Lagrangian formulation . . . . .	84
6.4	The energy-momentum tensor . . . . .	86
<b>7</b>	<b>Weak Gravitational Fields</b>	<b>91</b>
7.1	Linearised theory of gravity . . . . .	91
7.2	Gauge transformations . . . . .	93
7.3	Nearly Newtonian gravity . . . . .	95
7.4	Gravitational waves . . . . .	100
<b>8</b>	<b>The Schwarzschild Solution</b>	<b>111</b>
8.1	Cartan's structure equations . . . . .	111
8.2	Stationary and static spacetimes . . . . .	115
8.3	The Schwarzschild solution . . . . .	116
8.4	Solution of the field equations . . . . .	120
<b>9</b>	<b>The Schwarzschild Spacetime</b>	<b>127</b>
9.1	Orbits in the Schwarzschild spacetime . . . . .	127
9.2	Comparison to the Kepler problem . . . . .	130
9.3	Perihelion shift and light deflection . . . . .	133
9.4	Spins in the Schwarzschild spacetime . . . . .	137
<b>10</b>	<b>Schwarzschild Black Holes</b>	<b>143</b>
10.1	The singularity at $r = 2m$ . . . . .	143
10.2	The Kruskal continuation . . . . .	147

10.3	Physical meaning of the Kruskal continuation . . . . .	152
10.4	Redshift approaching the Schwarzschild radius . . . . .	156
<b>11</b>	<b>Charged, Rotating Black Holes</b>	<b>161</b>
11.1	The Reissner-Nordström solution . . . . .	161
11.2	The Kerr-Newman solution . . . . .	164
11.3	Motion near a Kerr black hole . . . . .	172
11.4	Entropy and temperature of a black hole . . . . .	177
<b>12</b>	<b>Homogeneous, Isotropic Cosmology</b>	<b>183</b>
12.1	Spherically-symmetric spacetimes . . . . .	183
12.2	Homogeneous and isotropic spacetimes . . . . .	187
12.3	Friedmann's equations . . . . .	191
12.4	Density evolution and redshift . . . . .	194
<b>13</b>	<b>Relativistic Astrophysics</b>	<b>199</b>
13.1	Light bundles . . . . .	199
13.2	Gravitational lensing . . . . .	201
13.3	The Tolman-Oppenheimer-Volkoff solution . . . . .	206
13.4	The mass of non-rotating neutron stars . . . . .	209
<b>A</b>	<b>Electrodynamics</b>	<b>213</b>
A.1	Electromagnetic field tensor . . . . .	213
A.2	Maxwell's equations . . . . .	213
A.3	Lagrange density and energy-momentum tensor . . . . .	214
<b>B</b>	<b>Differential Geometry</b>	<b>217</b>
B.1	Manifold . . . . .	217
B.2	Tangent and dual spaces . . . . .	217
B.3	Tensors . . . . .	218
B.4	Covariant derivative . . . . .	219
B.5	Parallel transport and geodesics . . . . .	220

B.6	Torsion and curvature . . . . .	220
B.7	Pull-back, Lie derivative, Killing fields . . . . .	221
B.8	Differential forms . . . . .	223
B.9	Cartan's structure equations . . . . .	224
B.10	Differential operators and integration . . . . .	225
<b>C</b>	<b>Penrose-Carter diagrams</b>	<b>227</b>
