Preface	vii
Acknowledgments	ix
1 Theoretical Foundations	1
1.1 Units	1
1.2 Lorentz Invariance	4
1.3 Electromagnetism	16
1.4 Elementary kinetic theory	27
2 Radiation Processes	37
2.1 Thomson scattering	37
2.2 Spectra	41
2.3 Synchrotron radiation	48
2.4 Bremsstrahlung	55
2.5 Radiation damping	61
2.6 Compton scattering	67
2.7 Radiative Quantum Transitions	77
2.8 Shapes of Spectral Lines	88
2.9 Radiation Quantities	96
2.10 The Planck spectrum and Einstein coefficients	100
2.11 Absorption and Emission	108
3 Hydrodynamics	117
3.1 The equations of ideal hydrodynamics	117
3.2 Relativistic Hydrodynamics	128
3.3 Viscous hydrodynamics	136
3.4 Flows under specific circumstances	150

3.5	Shock waves	168
3.6	Instabilities	180
4	Plasma Physics and Magnetohydrodynamics	197
4.1	Collision-less Plasmas	197
4.2	Electromagnetic Waves in Media	201
4.3	Dispersion Relations	206
4.4	Electromagnetic Waves in Thermal Plasmas	212
4.5	The Magnetohydrodynamic Equations	218
4.6	Generation of Magnetic Fields	226
4.7	Ambipolar Diffusion	229
4.8	Waves in magnetised cold plasmas	233
4.9	Hydromagnetic Waves	244
5	Stellar Dynamics	251
5.1	The Jeans equations and Jeans' theorem	251
5.2	Equilibrium and Stability	266
5.3	Dynamical Friction	282
	Brief summary and concluding remarks	288
