

Index

- ε -pseudo-spectrum, 41, 54, 185
- A-orthogonal, 124, 131
- A-scalar product, 124
- adjoint transpose, 23
- adjuncts, 23
- algorithm
 - classical Gram-Schmidt, 21
 - Crout, 63
 - exchange, 67
 - Gauß-Jordan, 66, 67
 - Gaussian elimination, 97
 - Givens, 92
 - Gram-Schmidt, 52, 77, 184
 - Householder, 78, 91
 - modified Gram-Schmidt, 22, 168
 - Thomas, 72
- angle, 25
- ansatz space, 137
- approximation property, 197
- arithmetic complexity, 56
- arithmetic operation, 56
- Arnoldi (1917–1995), 165
- Arnoldi basis, 168
- Arnoldi relation, 169
- backward substitution, 55, 59
- Banach space, 15
- band matrix, 7
- band type, 70
- band width, 71
- basis
 - orthogonal, 20
 - orthonormal, 20
- best approximation, 20
- bilinear form, 17
- Burgers equation, 178
- Cartesian basis, 1
- Cauchy sequence, 14
- central difference quotient, 141
- characteristic polynomial, 28, 95
- Chebyshev (1821–1894), 5
- Chebyshev equalization, 5
- Chebyshev polynomial, 119, 135
- Cholesky (1975–1918), 75
- Cholesky decomposition, 62, 75, 106
- coarse-grid correction, 195
- column pivoting, 57
- complex arithmetic, 185
- condition number, 46
- conditioning, 45
- contraction constant, 104
- coordinate relaxation, 127
- correction equation, 64
- Crout (1907–1984), 63
- defect, 5, 26, 29, 64, 76
- defect correction, 64, 65, 99
- defect equation, 191
- definiteness, 13
- Descartes (1596–1650), 1
- descent direction, 126
- descent method, 147
- determinant, 23
- deviation
 - maximal, 5
 - mean, 4
- difference approximation, 6
- difference equation, 6
- discretization, 6
- dyadic product, 79
- dynamic shift, 183
- eigenspace, 3, 28
- eigenvalue, 3, 28
 - deficient, 29
- eigenvalue equation, 28
- eigenvalue problem
 - full, 29
 - partial, 29
- eigenvector, 3, 28
 - generalized, 30
- energy form, 189
- equalization parabola, 5
- exponential stability, 38
- fill-in, 8
- finite difference discretization, 206
- fixed-point iteration, 99, 145
- fixed-point problem, 99
- forward substitution, 55, 59

- Frobenius (1849–1917), 33
 Galerkin (1871–1945), 131
 Galerkin equation, 131
 Galerkin orthogonality, 104
 Gauß (1777–1855), 56
 Gaussian elimination, 55, 56, 91
 Gaussian equalization, 4
 Gerschgorin circle, 50, 53
 Gershgorin (1901–1933), 49
 Givens (1910–1993), 92
 Givens transformation, 91
 Gram (1850–1916), 21
 grid transfer, 195

 Hölder (1859–1937), 17
 half-band width, 7
 Hessenberg (1904–1959), 49, 88
 Hessenberg normal form, 91
 Hestenes (1906–1991), 131
 homogeneity, 13
 Householder (1904–1993), 79
 Householder transformation, 79, 91

 identity
 parallelogram, 20
 Parseval, 20
 identity matrix, 23
 inequality
 Cauchy-Schwarz, 17
 Hölder, 18
 Minkowski, 14, 18
 Young, 18
 inverse iteration, 155, 185
 iteration matrix, 99

 Jacobi (1804–1851), 105
 Jordan (1838–1922), 30
 Jordan normal form, 30, 89

 Kantorovich (1912–1986), 128
 kernel, 23
 Kreiss (1930–2015), 40
 Kronecker symbol, 1, 23
 Krylov (1879–1955), 132
 Krylov matrix, 167
 Krylov space, 132, 184

 Lagrange basis, 206
 Lanczos (1893–1974), 165
 Lanczos algorithm, 185
 Lanczos relation, 171
 Laplace (1749–1827), 6
 line search, 126
 linear mapping, 22
 linear system, 2
 overdetermined, 2
 quadratic, 2
 underdetermined, 2
 load vector, 190
 LR decomposition, 55, 59, 62, 72, 97

 M-matrix, 149
 machine accuracy, 62
 mass matrix, 190
 matrix, 22
 irreducible, 145
 band, 70, 141
 consistently ordered, 114, 141
 diagonalizable, 32, 90, 156
 diagonally dominant, 72
 Frobenius, 56
 Hermitian, 24
 Hessenberg, 49, 88
 ill-conditioned, 48
 inverse, 23
 irreducible, 109, 141
 Jacobi, 142
 lower triangular, 71
 normal, 24, 54
 of nonnegative type, 149
 orthogonal, 25
 orthonormal, 25, 77
 permutation, 56
 positive definite, 24, 73, 124
 positive semi-definite, 24
 rank-deficient, 85
 reducible, 109
 regular, 23
 similar, 31, 88
 sparse, 72
 strictly diagonally dominant, 73
 symmetric, 24, 124
